NexusIQ Corporation

Cross-Business Intelligence Executive Summary — FY 2024

Prepared by: Chief Analytics Office | Classification: Executive | Date: January 2025

Overview

This report synthesizes FY 2024 performance across all NexusIQ business dimensions: sales transactions, customer relationships, product returns, inventory operations, and customer support. Total revenue reached **$175,595,178.16** from 100,000 transactions across 14,979 unique customers. The integrated view reveals four cross-cutting themes: Electronics dominance, West region leadership, return-support correlation, and inventory pressure in high-velocity SKUs.

FY 2024 Master KPI Dashboard

Dimension	Key Metric	Value	Status
Sales	Total Revenue	$175,595,178.16	✓ On Target
Sales	Total Transactions	100,000	✓ On Target
Sales	Avg Transaction Value	$1,755.95	✓ On Target
Customers	Unique Customers	14,979	✓ Growth
Customers	Avg Lifetime Value	$11,722.76	✓ Growth
Customers	Max Customer Spend	$59,521.80	— Outlier
Returns	Total Returns	6,000 (6.0%)	■ Monitor
Returns	Avg Refund	$1,618.61	■ Monitor
Returns	Refund Exposure	~$9.7M	■ Monitor
Inventory	Records Tracked	2,000	✓ OK
Inventory	Below Reorder Point	72 (3.6%)	■ Action
Support	Total Cases	2,000	✓ Managed
Support	Open / Unresolved	489 open	■ Action
Support	Resolution Rate	50.3%	— Improve

Revenue by Region — All Dimensions

West leads in total revenue ($37,880,499.39) despite ranking third in customer count (2,351). This revenue concentration is driven by high Electronics spend. West also has the highest inventory pressure (22 low-stock records) and the second-highest Electronics return rate. Central region, with the most customers (4,599), trails in per-customer revenue — a segmentation opportunity for Q1 2025 upsell campaigns.

Region	Revenue	Customers	Returns (est.)	Support Cases (est.)	Low Stock
West	$37,880,499.39	2,351	~1,080	~420	22
East	$36,314,020.57	3,676	~1,440	~520	15
Central	$35,679,253.01	4,599	~1,380	~560	18
South	$35,470,111.47	2,330	~1,140	~290	11
North	$30,251,293.72	2,023	~960	~210	6

Electronics: The Cross-Cutting Dimension

Electronics is the central theme across all five business dimensions in FY 2024:

Revenue: $91,010,125.61 — 51.8% of total $175.6M revenue.

Returns: Tablet (314), Phone (309), Laptop (302) = 925 of 6,000 returns. Average Electronics refund ~$574 vs overall average $1,618.61 (note: overall avg pulled up by multi-item returns).

Inventory: 31 of 72 low-stock alerts are Electronics SKUs. Laptop/Phone/Tablet turn over in 18–22 days.

Support: ~840 of 2,000 support cases (42%) are Electronics category. Primary subjects: defective units, warranty, setup.

Customers: West-region customers (top Electronics buyers) drive the highest regional revenue despite third-place customer count.

Return & Support Co-occurrence Analysis

38% of returns (2,280 of 6,000) have an associated support case. This co-occurrence is critical for two reasons: (1) customers with support cases get returns approved at 62% vs 43% without — suggesting support acts as a proxy for return approval escalation; (2) the 1,242 rejected returns ($0 refund) represent a customer dissatisfaction risk, especially for the 489 open support cases awaiting resolution.

Scenario	Returns	Approval Rate	Avg Refund	Revenue Risk
With support case	2,280	62%	$1,812	$4.1M exposure

Without support case	3,720	43%	$1,511	$5.6M exposure
Overall	6,000	51%	$1,618.61	$9.7M total

Customer Lifetime Value vs Operational Cost

Average customer lifetime value of $11,722.76 must be weighed against per-customer operational costs. Each return costs an estimated $42–$68 in processing (admin + refund + potential restocking). Each support case costs approximately $28–$45 (agent time + tooling). With 14,979 customers, 6,000 returns, and 2,000 support cases, total operational cost for post-purchase services is estimated at $380,000–$550,000 — approximately 0.22–0.31% of total revenue. Industry benchmark is 0.8–1.2%, suggesting NexusIQ is operating efficiently but may be under-investing in proactive support to prevent the Gold-tier churn risk (31.4% unresolved rate).

Inventory × Revenue Alignment

72 low-stock inventory records represent a stockout risk. If the 22 West-region Electronics low-stock records result in stockouts, the potential lost revenue is estimated at $2.1M–$3.8M in Q1 2025 (based on West Electronics velocity: $37.9M annual → ~$9.5M quarterly, and 22/100 store-product combos at risk). Emergency restocking investment of ~$180,000 in expedited POs would protect an estimated 12–20× revenue. Priority: West Laptop, West Phone, East Tablet.

Policy Compliance Note

All return calculations in this report use the current 30-day return window (Policy v2.0, effective Q3 2024). The 1,242 rejected returns include cases where customers attempted returns after 30 days. Any reference to a 14-day return window reflects the superseded Policy v1.0 (retired Q2 2024) and should not be used for operational decisions.

Cross-Table Query Reference

Key SQL joins enabling this cross-dimensional analysis:

- **Sales ↔ Customers:** sales_transactions.customer_id = customers.customer_id
- **Sales ↔ Returns:** returns.transaction_id = sales_transactions.id
- **Returns ↔ Customers:** returns.customer_id = customers.customer_id
- **Support ↔ Customers:** support_cases.customer_id = customers.customer_id
- **Inventory ↔ Products:** inventory.product_name = products.product_name

FY 2025 Strategic Imperatives

1. **Electronics Supply Chain:** Protect $91M revenue stream — emergency restock 22 West/East Electronics low-stock records.
2. **Gold-Tier Churn Prevention:** 31.4% unresolved support rate in $15k–$30k spend tier. Assign dedicated CSMs immediately.
3. **Return Rate Reduction:** 6.0% overall (vs 4.5% industry benchmark). Clothing size tools + Electronics QA = primary levers.
4. **Central Region Revenue Uplift:** 4,599 customers (largest base) but $35.7M revenue (3rd). Upsell Electronics to Central customers currently over-indexed on Home and Food.
5. **Support Backlog:** 489 open cases by Q1 week 1. Agent surge or triage automation required.
