

NexusIQ Corporation

Inventory Operations & Stock Intelligence Report — FY 2024

Prepared by: Supply Chain & Operations Analytics | Classification: Internal | Date: January 2025

Executive Summary

NexusIQ maintains **2,000 inventory records** spanning 20 product SKUs across 100 store locations (20 stores per region × 5 regions). As of the FY 2024 year-end snapshot, **72 store-product combinations** (3.6%) are below their reorder point, creating potential stockout risk entering Q1 2025. Electronics items — responsible for \$91,010,125.61 (51.8%) of total FY 2024 revenue — show the highest inventory turnover and the greatest reorder urgency.

Inventory Overview KPIs

Metric	Value
Total Inventory Records	2,000
Store Locations	100 (20 per region)
Product SKUs Tracked	20
Below Reorder Point	72 (3.6%)
Avg Stock Level (all SKUs)	487 units
Avg Reorder Point	120 units
Stockout Risk (< 50 units)	18 records

Low-Stock Alerts by Category

Of the 72 records below reorder point, Electronics accounts for 31 (43.1%), driven by high sell-through rates for Laptop, Phone, and Tablet. Home category contributes 19 low-stock records (26.4%), primarily Bedding and Furniture. This pattern aligns with return data: high-volume Electronics returns do not materially replenish stock because returned units require refurbishment before restocking — typically a 7–14 day cycle.

Category	Low-Stock Records	% of 72 Alerts	Highest Urgency SKU	FY Revenue Impact
Electronics	31	43.1%	Laptop	\$91,010,125.61

Home	19	26.4%	Bedding	\$40,877,008.66
Clothing	11	15.3%	Jeans	\$11,731,765.10
Sports	7	9.7%	Equipment	\$27,478,085.87
Food	4	5.6%	Frozen	\$4,498,192.92

Regional Inventory Distribution

The West region — top revenue contributor at \$37,880,499.39 — has the highest concentration of Electronics inventory pressure. Central region stores (4,599 customers, largest customer base) face Home and Food category shortfalls consistent with that region's category affinity. North region stores, despite the smallest customer base (2,023), have the highest per-store average stock levels due to lower turnover velocity.

Region	Stores	Low-Stock Records	Top Urgency Category	Regional Revenue
West	20	22	Electronics	\$37,880,499.39
Central	20	18	Home	\$35,679,253.01
East	20	15	Electronics	\$36,314,020.57
South	20	11	Clothing	\$35,470,111.47
North	20	6	Sports	\$30,251,293.72

Inventory vs. Sales Velocity Correlation

Products with the highest FY 2024 sales volumes (Laptop, Phone, Tablet) also have the fastest inventory depletion rates. Cross-referencing sales_transactions (100,000 records, \$175,595,178.16 revenue) with inventory snapshots reveals that the top 3 Electronics SKUs turn over every 18–22 days on average. By contrast, Food items (Drinks, Snacks, Produce, Frozen) turn over in 3–5 days but carry low per-unit margins (\$4,498,192.92 total revenue). Sports equipment (Equipment, Footwear) turns over every 35–45 days with \$27,478,085.87 annual revenue.

Product	Category	Est. Turnover	FY Sales Rank	Reorder Urgency
Laptop	Electronics	20 days	1	HIGH
Phone	Electronics	18 days	2	HIGH
Tablet	Electronics	22 days	3	HIGH
Bedding	Home	28 days	4	MEDIUM

Furniture	Home	45 days	5	LOW
Jeans	Clothing	32 days	6	MEDIUM
Equipment	Sports	38 days	7	LOW
Produce	Food	3 days	8	HIGH (perishable)

Returns Impact on Inventory

FY 2024 recorded 6,000 returns with an average refund of \$1,618.61. Electronics returns (Tablet: 314, Phone: 309, Laptop: 302) total 925 units with high per-unit refund values (~\$574 average for Electronics category). These returns require QA processing (7–14 days) before restocking, creating a de facto delay in inventory replenishment for the highest-urgency SKUs. Recommendation: parallel-path Electronics returns through dedicated QA to compress refurbishment cycle to < 5 days.

Q1 2025 Restocking Plan

Priority 1 — Immediate (Week 1–2):

18 inventory records at critical stockout risk (< 50 units). Emergency POs recommended for Laptop, Phone, and Bedding SKUs in West and East regions to protect \$37.9M and \$36.3M revenue bases.

Priority 2 — Short-term (Week 3–6):

54 additional below-reorder-point records across all categories. Standard reorder cycle sufficient. Coordinate with suppliers on Jeans and Decor lead times given high return volumes (331 and 322 returns respectively) — net demand may be lower than gross orders suggest.

Report Sources: inventory (2,000 rows), sales_transactions (100,000 rows), returns (6,000 rows). Join: inventory.product_name → products.product_name; inventory.store_id → store dimension. Data as of FY 2024 year-end.
