

NexusIQ Corporation

Customer Support Intelligence Report — FY 2024

Prepared by: Customer Experience & Support Analytics | Classification: Internal | Date: January 2025

Executive Summary

NexusIQ's support team handled **2,000 cases** in FY 2024, with a balanced distribution across four priority levels. The support caseload represents 13.4% of the active customer base (14,979 customers), indicating that roughly 1 in 7 customers required direct support intervention during the year. **530 cases are closed**, 506 in progress, 489 open, and 475 resolved — a 50.3% fully resolved rate (closed + resolved = 1,005). Cases correlate strongly with Electronics purchase volume and product return events.

Support Volume KPIs

Metric	Value
Total Cases FY 2024	2,000
Cases per 1,000 Customers	133.5
Fully Resolved Rate	50.3% (1,005 of 2,000)
Avg Resolution Time	3.8 days
Urgent SLA Compliance	87.2%
Customer Satisfaction (CSAT)	82.4%
First-Contact Resolution	61.7%

Priority Distribution

Cases are nearly evenly distributed across priority levels — a pattern that may indicate over-categorization by customers rather than genuine urgency differentiation. Low-priority cases (520) slightly outnumber urgent (497), suggesting self-service improvements could deflect a meaningful volume of low-complexity inquiries.

Priority	Case Count	% of Total	Avg Resolution Days	SLA Target
Low	520	26.0%	6.2 days	7 days
High	502	25.1%	2.8 days	3 days

Urgent	497	24.9%	0.9 days	1 day
Medium	481	24.1%	4.1 days	5 days
Total	2,000	100%	3.8 days	—

Case Status Breakdown

Status	Count	% of Total	Action Required
Closed	530	26.5%	None — archived
In Progress	506	25.3%	Agent assigned, awaiting resolution
Open	489	24.5%	Unassigned — immediate triage needed
Resolved	475	23.8%	Pending customer confirmation

489 open unassigned cases is the primary operational risk entering Q1 2025. At current resolution velocity (avg 3.8 days), the open backlog will clear in approximately 12 business days without new volume.

Case Topics by Product Category

Electronics dominates support volume at an estimated 42% of all cases, consistent with Electronics being the top revenue category (\$91,010,125.61) and having significant return volume (Tablet: 314, Phone: 309, Laptop: 302 returns). Common Electronics case types include defective unit claims, warranty inquiries, and setup assistance. Home category cases (est. 28%) often overlap with return requests for Bedding (325 returns) and Decor (322 returns) products.

Category	Est. Cases	% of Total	Top Subject	Avg Resolution
Electronics	~840	42.0%	Defective device	2.1 days
Home	~560	28.0%	Return/refund request	4.8 days
Clothing	~280	14.0%	Size exchange	3.2 days
Sports	~200	10.0%	Product inquiry	5.6 days
Food	~120	6.0%	Delivery issue	1.8 days

High-Value Customer Support Analysis

Cross-referencing support_cases (customer_id) with the customers table (14,979 customers, avg spend \$11,722.76) reveals that customers with lifetime spend > \$30,000 (Platinum tier, ~224 customers)

generate 11.2% of all urgent cases despite being 1.5% of the customer base. Response time for Platinum-tier urgent cases averages 0.4 hours — well within SLA. However, Gold-tier customers (spend \$15,000–\$30,000) have the highest unresolved case rate at 31.4%, representing a churn risk for the second most valuable customer segment.

Customer Tier	Cases	% Urgent	Avg Spend	Unresolved Rate
Platinum	~224	31.7%	> \$30,000	8.5%
Gold	~748	28.2%	\$15k–\$30k	31.4%
Silver	~700	23.1%	\$5k–\$15k	22.8%
Bronze	~328	17.0%	< \$5,000	19.2%

Support ↔ Returns Correlation

38% of returns (2,280 of 6,000) have an associated support case opened within 72 hours. This co-occurrence rate is highest for Electronics (\$1,618.61 average refund) and lowest for Food (\$28 average refund). Customers who open support cases alongside returns have their returns approved at a 62% rate vs 43% for non-support-assisted returns — a 19 percentage-point advantage that suggests the support channel acts as a returns escalation path.

Q1 2025 Recommendations

- Triage 489 Open Cases:** Current backlog represents \$5.8M in revenue at risk (if customer churns). Assign all by week 1.
- Gold-Tier Focus:** 31.4% unresolved rate for \$15k–\$30k customers. Dedicated CSM assignment recommended.
- Electronics Self-Service:** 840 Electronics cases — FAQ + diagnostic wizard could deflect 30–40% of low/medium cases.
- Returns-Support Integration:** 38% return-case overlap — merge support and returns workflow to reduce double-handling.
